

Establishment

The Commemorative Museum of Industry and Technology was established jointly by the Toyota Group. The Museum is located at the site of the former Toyoda Spinning & Weaving Co., Ltd. headquarters plant, which was the place where the Toyota Group had its beginning. The building was thus preserved as a valuable industrial resource.

The Toyota Group originated from Sakichi Toyoda the inventor of the automatic loom and his oldest son Kiichiro Toyoda, who began production of looms and automobiles. Their aims were to pour all their strength into developing the economy and society through "Making Things" and through "Being Studious and Creative."

In recent years, as production activities have become more and more sophisticated, opportunities to actually witness the process of "making things" have decreased. The Commemorative Museum of Industry and Technology was established to give today's young people, who must shoulder the burdens of the future age, a glimmer of an understanding, if possible, of the importance of "Being Studious and Creative" as well as to inspire them with the wonder of "making things".
